

Exam Proctor: Invigilator Guide

Faculty pilot · Monday 5 October 2026 · 11:30 to 12:30 · Old IQAC

As an invigilator you watch every participant on one live screen, see within seconds who has left the allowed sites, and review each flag afterwards. No technical knowledge is needed: this guide covers everything in about 10 minutes of reading.

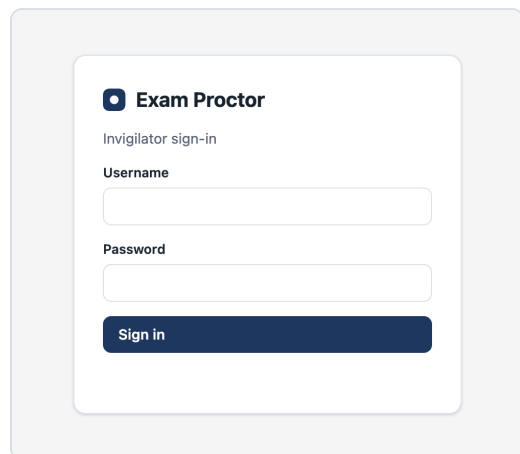

Dashboard	https://exam-proctor-rhbo.onrender.com/dashboard , in any browser, on a laptop, tablet or phone
Your login	Created for you by the organiser (Nikhil D Jonathan). Change the password after your first sign-in: Admins → Change my password
Pilot exam	Faculty pilot: EDA on diamonds , code <code>FACPILOT1</code> , monitored 11:30 to 12:20
Participants	Up to 40 faculty, each using their XIME email name as roll number
Arrive	11:00, to set up and help participants join

1. How it works in one minute

- Each exam has its own list of **allowed sites**. For this pilot: Kaggle, Google sign-in, and the pandas, seaborn and matplotlib documentation.
- Participants join from the Chrome extension with the **exam code**, their roll number and a **PIN** that you show at 11:20.
- From 11:30 the extension reports the page each participant is on. Anything not on the list, or switching to another app, turns their **tile red** and raises a **flag** within seconds. The participant is warned on their own screen at the same moment.
- A flag is a **prompt to look**, never a verdict. You confirm or dismiss each one, with a note.

Level	Raised when
high	A site that is not allowed for more than 3 seconds; another app in front; the extension removed during the exam
medium	No contact from the extension for 90 seconds (browser closed, extension switched off, or Wi-Fi lost); a Chrome settings page; screen locked; rejoining from another browser
low	A background tab open on a site that is not allowed; a gap that was only a network drop

2. Signing in

The sign-in page

- 1 Open `exam-proctor-rhbo.onrender.com/dashboard`.
- 2 Enter the username and password you were given, then click **Sign in**.
- 3 The first visit of the day can take up to a minute while the server wakes. This is normal on the free plan.

After 8 wrong passwords

Sign-in is locked for 10 minutes from that network. Ask the organiser to reset your password rather than guessing.

3. The pilot exam settings (organiser)

The organiser creates the exam before Monday with **+ New exam**. Other invigilators can check the settings with **Edit exam & allowed sites**, but should not change them.

Field	Value
Exam name	Faculty pilot: EDA on diamonds
Exam code	FACPIL0T1
Starts / Ends	5 Oct 2026, 11:30 / 5 Oct 2026, 12:20
Exam PIN	A new 6-digit number, shown only at 11:20
Grace period	3 seconds
Flag leaving Chrome	On
Allowed sites	kaggle.com , accounts.google.com , pandas.pydata.org , seaborn.pydata.org , matplotlib.org (one per line)
Class roster	Optional: one line per confirmed participant, emailname, Full Name

Allowed sites (one per line)

accounts.google.com
kaggle.com
matplotlib.org
pandas.pydata.org
seaborn.pydata.org

Write a **site** to allow every page on it, including its subdomains: `colab.research.google.com` allows every Colab notebook. Add a **path** to allow only part of a site: `docs.google.com/forms/d/e/ABC` allows that one form, not all of Google Docs. You can paste links straight from the address bar. Any site not listed is flagged.

- ✓ **accounts.google.com** : whole site, every page, including subdomains
- ✓ **kaggle.com** : whole site, every page, including subdomains
- ✓ **matplotlib.org** : whole site, every page, including subdomains
- ✓ **pandas.pydata.org** : whole site, every page, including subdomains
- ✓ **seaborn.pydata.org** : whole site, every page, including subdomains

Test a link

Paste any link to check it, e.g. `https://colab.research.google.com/drive/...`

Allowed sites: the preview under the box explains how each line is applied

Before the exam, paste a few links into **Test a link**, such as a Kaggle notebook, a pandas documentation page and `bbc.com/news`, and check each result. A link that would be flagged has an **Allow** button next to it:

Test a link

`https://www.bbc.com/news`

✗ **Would be flagged** : `bbc.com/news` is not covered by any line above. **Allow bbc.com**

Test a link: paste any address to see whether it is allowed

4. Exam-day timeline for invigilators

Time	What to do
11:00	Sign in to the dashboard on the room's laptop and projector, and on your own device. Open the exam's live view (click the exam in the list).
11:15	Welcome participants. Check each has Chrome and the stopwatch icon pinned. Hand out the printed question papers face down.
11:20	Show the PIN on the projector. Watch Joined X / Y rise; use the Not joined filter to find anyone who needs help.
11:30 to 11:37	Part A, system check: announce each step at its time (Appendix). Expect red tiles: they are deliberate.
11:38	Part B: put the Kaggle notebook address on the projector. "Turn over your question papers. Open the notebook, click Copy & Edit, and begin."
11:38 to 12:15	Watch for red tiles. If many participants are flagged on the same site, it may be a site the exam needs (section 7).
12:15	"Please stop working." Keep the live view open until 12:20.
12:20	Show the feedback form link. Lead a 10-minute discussion.

Time	What to do
12:35	After the 15-minute upload buffer: review flags and export the CSV (section 8).

The live view during a rehearsal: 12 of 14 joined, 2 violating now, 1 offline

Part of the screen	What it tells you
Header	Exam name, status (scheduled, running or finished) and the time left
Five numbers	Joined out of the roster; online now; on a site that is not allowed right now ; offline for 90 seconds or more; open high flags
Filter buttons and search	Show only those violating now, offline, with high flags, or not yet joined; search by roll number or name
Tiles	One per participant, sorted with problems first. Green : on an allowed site. Red : on a site that is not allowed, or in another app, with how long. Amber : offline. Grey : not joined. The red and amber numbers are the participant's high and medium flags
Flags panel (right)	Every new flag as it happens, newest first. A pop-up message also appears for each new high flag

The screen refreshes itself every 3 seconds; there is no need to reload the page.

6. Looking into one participant

The screenshot shows the Exam Proctor interface. On the left, a grid of participant tiles is displayed. Each tile shows the participant's name, status (e.g., 'Not allowed', 'On allowed site'), and a count of flags. The top right panel shows a detailed view for JOHN.D. It includes a timeline bar, a list of flags (e.g., 'Visited a site that is not allowed', 'Switched to another app or window'), and an activity log.

Click any tile (or any flag) to open the participant's panel

- **Timeline:** green is time on allowed sites and red is time elsewhere, from start to end.
- **Flags:** each one with the site, the page title, how long and when. Use the buttons:
 - **Confirm:** you agree it needs follow-up. Add a short note.
 - **Dismiss:** it has an innocent explanation, such as a deliberate system-check step. Add a note.
 - **Allow <site>:** the exam really needs this site. It is added for **everyone**, their tiles turn green, and its open flags are dismissed. Use it only when you are sure.
- **Activity log:** every page visited during the exam, with times. Search terms are never recorded.

7. Situations and what to do

You see	What to do
One red tile, an unfamiliar site	Note it. Review it after the exam; don't interrupt the participant during the pilot.
Many red tiles on the same site at once	The exam probably needs that site (for example a sign-in page). Check the address, then use Allow <site> on one flag.
An amber (offline) tile	Their Wi-Fi dropped or Chrome closed. Check on them quietly. If it was only Wi-Fi, the flag drops to low on its own when they reconnect.
Grey (not joined) after 11:30	Help them join: code <code>FACPILOT1</code> , email name, PIN. They can join at any time before 12:20.

You see	What to do
"Cannot reach the exam server" for many people	Check the room's Wi-Fi, then open the dashboard. If the dashboard also fails, note the time; the extensions keep recording and send everything when the server returns.
Activity log shows other people's Kaggle notebooks, a dataset's Code tab or discussions	Kaggle is an allowed site, so these pages raise no flag; you only see them in the participant's activity log. Note the times and review them after the exam as possible copying. For future exams, prefer platforms where students can't browse others' solutions.
"Extension removed" flag	Ask the participant to reinstall it from the store and rejoin with the same details. Rejoining after a reinstall also adds a medium "rejoined from a different browser" flag; that is expected.

8. After the exam

- 1 Wait until about 12:35 so delayed uploads arrive.
- 2 Review the flags. In the pilot, the Part A flags in the Appendix are expected: **Dismiss** them with the note "system check". Anything else is a finding: **Confirm** it and describe it in the note.
- 3 Click **Export flags (CSV)** and save the file with the date.
- 4 Screenshot the live view, then send the CSV and your notes to the organiser.

The organiser deletes the pilot exam, and with it all pilot records, within 30 days.

Appendix: the Part A system check, and the flags it should produce

Announce each step at its time. For each participant you should see exactly these flags; if one is missing, or an extra one appears, write down the roll number and time.

Time	Participants do	Expected on the dashboard
11:30	Open <code>pandas.pydata.org</code> and click around	Tile green. No flag
11:32	Open <code>bbc.com/news</code> in a new tab, wait 10 seconds, close it	Tile red for about 10 seconds; one high "Visited a site that is not allowed: <code>bbc.com/news</code> "
11:33	Switch to another app for 10 seconds, then back	Tile red; one high "Switched to another app or window"
11:34 to 11:37	Open <code>youtube.com</code> in a new tab, go back to pandas, close YouTube at 11:37	Tile stays green with "Other tabs open: <code>youtube.com</code> "; one low "Has a tab open on a site that is not allowed"
11:38 to 12:15	The EDA questions in their own Kaggle notebook and the documentation sites	Ideally no new flags. A low "tab open" flag means they left another tab open from before (for example email). In the activity log, Kaggle pages should be their own notebook (<code>kaggle.com/code/<their name>/.../edit</code>)
