

Exam Proctor: Participant Guide

Faculty pilot · Monday 5 October 2026 · 11:30 to 12:30 · Old IQAC

Thank you for taking part. For one hour you will sit a short mock exam as a "student", while a Chrome extension called **Exam Proctor** checks that you stay on the websites the exam allows. We are testing the tool, not you: nothing is graded.

When	Monday 5 October 2026. Please arrive by 11:15 . Monitoring runs 11:30 to 12:20, then feedback until 12:30.
Where	Old IQAC
Bring	Your laptop with Google Chrome , its charger, and your phone
Exam code	FACPILOT1 (capital letters, ending in the digit one)
Roll number	Your XIME email name, the part before @ (for example nikhildj)
Exam PIN	Shown on the screen at 11:20
Before Monday	Install the extension (section 1, about 5 minutes)

What it records, only from 11:30 to 12:20

- The address of the page in your active tab (without search terms) and its title
- Other open tabs on sites that are not allowed
- When you switch to another app, or stop using the keyboard and mouse

What it never records

- Keystrokes, passwords or anything you type
- Page content, your screen, camera or microphone
- Anything before 11:30 or after 12:20

Pilot records are deleted within 30 days. Full privacy policy: exam-proctor-rhbo.onrender.com/privacy

1. Before Monday: install the extension (5 minutes)

- 1 On the laptop you will bring, open **Google Chrome**. Other browsers (Safari, Edge, Firefox) will not work.
- 2 Open this link in Chrome:
<https://chromewebstore.google.com/detail/jheoojginplgillkdegkhlglblcmoimd>
It is also in the invitation email; clicking it there is easiest.
- 3 Click the blue **Add to Chrome** button, then **Add extension** in the box that appears.
- 4 **Pin the icon** so it is always visible: click the puzzle-piece icon at the top right of Chrome, then the pin next to **Exam Proctor**. A small navy stopwatch icon appears in the toolbar.
- 5 Click the stopwatch icon. **You should see:** a notice and a form asking for the exam code, roll number and PIN. Close it for now; you join on Monday.

- 6 **Create a free Kaggle account and sign in.** Go to `kaggle.com` and click **Register (Sign in with Google is quickest)**. Then click **Create** → **New Notebook** once to check that the notebook editor opens. Stay signed in to Kaggle in Chrome, so you will not need to sign in during the test. No phone verification is needed.

On a Mac: let Chrome show notifications

Warnings appear as notifications. Open **System Settings** → **Notifications** → **Google Chrome** and switch on **Allow notifications**. If you skip this, the warnings will still show on the icon, but not as pop-ups.

Laptop managed by IT?

Some managed laptops block extensions. If **Add to Chrome** is greyed out or refused, reply to the invitation email before Monday so we can help.

2. On the day: timetable

Time	What happens
11:15	Arrive, connect to Wi-Fi, open Chrome, close the tabs you don't need, and check you are still signed in to <code>kaggle.com</code>
11:20	The PIN is shown on the screen. Join the exam (section 3)
11:30	Monitoring starts. Part A: system check , 7 minutes (section 5)
11:38	Part B: the mock exam , an analysis of the diamonds dataset in a Kaggle notebook (section 6)
12:15	Stop working; keep your notebook if you wish
12:20	Monitoring ends. Fill in the feedback form (its link is shown on the screen)
12:20 to 12:30	Open discussion: what worked, what didn't

3. Joining the exam (11:20 to 11:30)

Exam Proctor

During the exam's start and end time only, this extension reports the website open in your active tab (address without search terms, and page title), other open tabs that are not allowed, and when you switch to another app or stop using the keyboard and mouse.

Your instructor sets which sites are allowed. Visiting any other site, or leaving the browser, is flagged for review. The extension does not record keystrokes, page content, your screen, camera or microphone.

Exam code

Roll number

Exam PIN

☒ I have read the notice above and agree to this monitoring for this exam.

Join exam

- 1 Click the Exam Proctor stopwatch icon in Chrome's toolbar.
- 2 Type the **exam code** FACPILOT1 .
- 3 Type your **roll number**: your XIME email name, the part before @.
- 4 Type the **PIN** shown on the screen.
- 5 Read the notice, tick **I have read the notice...**, and click **Join exam**.

Exam Proctor

● **Joined. Monitoring starts at 11:30**

Exam	Faculty pilot: EDA on diamonds
Student	ANITA.K (Anita Kumar)
Time	5 Oct, 11:30 to 12:20
Connection	Connected, last sent 11:21

Allowed sites

- accounts.google.com
- kaggle.com
- matplotlib.org
- pandas.pydata.org
- seaborn.pydata.org

The join form, filled in

You should see: "Joined. Monitoring starts at 11:30", with the list of allowed sites.

4. Reading the icon and the warnings

The small label on the stopwatch icon shows how you are doing at a glance:

Icon label	Meaning	What to do
ON	Monitoring is running and you are on an allowed site	Nothing. Carry on
!	You are on a site that is not allowed, or outside Chrome	Go back to an allowed site straight away
No label	Monitoring is not running (before 11:30 or after 12:20)	Nothing

Exam Proctor

● Monitoring until 12:20

You are on an allowed site.

Exam Faculty pilot: EDA on diamonds
Student ANITA.K (Anita Kumar)
Time 5 Oct, 11:30 to 12:20
Connection Connected, last sent 11:51

Allowed sites

- accounts.google.com
- kaggle.com
- matplotlib.org
- pandas.pydata.org
- seaborn.pydata.org

On an allowed site: a green message

Exam Proctor

● Monitoring until 12:20

You are NOT on an allowed site. This is being reported.

Exam Faculty pilot: EDA on diamonds
Student ANITA.K (Anita Kumar)
Time 5 Oct, 11:30 to 12:20
Connection Connected, last sent 11:32

Allowed sites

- accounts.google.com
- kaggle.com
- matplotlib.org
- pandas.pydata.org
- seaborn.pydata.org

On a site that is not allowed: a red message

When you open a site that is not allowed, a notification also appears: **"This site is not allowed in this exam"**. If you switch to another app, it says **"You left the exam browser"**. A visit shorter than 3 seconds, such as a mis-click you close at once, is not reported.

5. Part A: system check (11:30 to 11:37)

These four steps deliberately trigger each kind of warning, so we can check that the tool notices them. Follow the times; the organiser will also announce each step.

- 1 11:30. An allowed site.** Open `pandas.pydata.org` and click around for a minute. **You should see:** the **ON** label.
- 2 11:32. A forbidden site.** Open `bbc.com/news` in a new tab, wait about 10 seconds, then close that tab. **You should see:** a "not allowed" warning and the **!** label, then **ON** again.
- 3 11:33. Another app.** Switch to Word, Finder or File Explorer for about 10 seconds, then come back to Chrome. **You should see:** "You left the exam browser".
- 4 11:34. A background tab.** Open `youtube.com` in a new tab, then click back to the pandas tab and leave YouTube open. At **11:37**, close the YouTube tab.

6. Part B: the mock exam (11:38 to 12:15)

You will receive a printed question paper with 10 short questions on **exploratory data analysis of the diamonds dataset**: 53,940 diamonds with their price, carat, cut, colour and clarity. You work in a Kaggle notebook that already has the data attached.

- 1 At 11:38 the notebook's address is shown on the projector. Type it into Chrome and click **Copy & Edit** (top right). Your own copy opens, with the data attached.
- 2 Run the first cell with **Shift + Enter**. The first run takes about 30 seconds while Kaggle starts the notebook.
- 3 Answer each question in the empty cell below it. Add a text cell (+ **Markdown**) where a question asks you to explain.

Allowed during the exam

- `kaggle.com` : **your own** notebook
- `accounts.google.com` : Google sign-in, if you use it for Kaggle
- Documentation: `pandas.pydata.org` , `seaborn.pydata.org` , `matplotlib.org`

Everything else is reported, for example

- Google Search, ChatGPT, Gemini or any other AI tool, Stack Overflow, YouTube
- Email, WhatsApp or other apps on the laptop. Use your phone only for this guide
- Other people's notebooks, datasets' Code tabs and discussions on Kaggle. They are on an allowed site, so you will not see a warning, but every page you open is listed for the invigilators

Need a site that is not on the list?

Raise your hand. The invigilator can add a site for everyone in a few seconds, and the change reaches your extension within 30 seconds.

7. At the end (12:20)

Exam Proctor

● Exam finished. Monitoring stopped.

Exam Faculty pilot: EDA on diamonds
Student ANITA.K (Anita Kumar)
Time 5 Oct, 11:30 to 12:20
Connection Connected, last sent 12:20

Allowed sites

- `accounts.google.com`
- `kaggle.com`
- `matplotlib.org`
- `pandas.pydata.org`
- `seaborn.pydata.org`

[Join a different exam](#)

You should see: "Exam finished. Monitoring stopped." The icon label disappears and nothing more is recorded.

- 1 Open the **feedback form** shown on the screen. It takes about 3 minutes.
- 2 Keep the extension for future exams, or remove it: right-click the stopwatch icon, then **Remove from Chrome**. Please wait until after 12:20; removing it during the exam is reported.

After 12:20

8. If something goes wrong

You see	What to do
"Cannot reach the exam server"	Check the Wi-Fi. The server may be waking up: wait one minute and try again.
"No exam with this code"	Check the code: <code>FACPIL0T1</code> , capital letters, ending in the digit one.
"Incorrect exam PIN"	Re-type the PIN from the screen.
The  label while you are in Kaggle	Check the address bar starts with <code>kaggle.com</code> . If it does, raise your hand.
Copy & Edit is missing or fails	Check you are signed in to Kaggle. Or click Create → New Notebook , then Add Input in the right-hand panel, search diamonds (by Shivam Agrawal) and click + ; then type the first cell from the question paper.
Chrome crashed or the laptop restarted	Reopen Chrome, click the icon and join again with the same details. Nothing is lost.
The Wi-Fi drops	Carry on working. The extension saves everything and sends it when you reconnect.
Anything else	Raise your hand, or email nikhildj@xime.org
